

**Name of Project:**

Centralz

**Prepared by :**

Hacx

## **Centralized Database**

A Centralized Database for storage to store the history of the patients and when ever patients go to the doctor, the doctor can access the database using the patients aadhar or the unique id give to user when he or she first time registers

# Tracking System

## Simple and Attractive UI:

There are many great and experienced doctor but they are not familiar with the Technology. So we decided to make it as less interactive is possible so that they have a very easy access the information about the patient
